

## Solar Panels and Inverters

### Overview

A solar inverter is really a converter, though the rules of physics say otherwise. A solar power inverter converts or inverts the direct current (DC) energy produced by a solar panel into Alternate Current (AC.) Most homes use AC rather than DC energy. DC energy is not safe to use in the home. The solar process begins with sunshine, which causes a reaction within the solar panel. That reaction produces a DC. However, the newly created DC is not safe to use in the home. Oversizing means that the inverter can handle more energy transference and conversion than the solar array can produce. The inverter. Choosing a solar power inverter is a big decision. Much of the information about selecting an inverter has to do with the challenges that a solar array on your roof would have. For example, is there shade, or is there not sufficient south-facing panels, etc. Other. When it comes to choosing a solar inverter, there is no honest blanket answer. Which one is best for your home or business?

That depends on a few factors: 1. How.
